IP/OP : OPD

**DEPARTMENT OF RADIO-DIAGNOSIS**

USG NO: 9282

**BILATERAL SONOMAMMOGRAPHY**

There is an anechoic lobulated lesion in the right retroareolar region measuring 30 x 13 mm with free floating internal echoes and dependent echogenic debris. There is minimal peripheral vascularity around the lesion.

There is an anechoic cystic lesion in the right lower outer quadrant at 7' O clock measuring 20 x 12 mm with no calcification / vascularity within.

There is enlarged right axillary lymph node measuring 18 x 7 mm with maintained fatty hilum.

- No sonologically detected abnormalities in the left breast parenchyma.
- No duct ectasia.
- Axillary tails are normal bilaterally.

**IMPRESSION:**

**CYSTS IN THE RIGHT BREAST AS DESCRIBED.**

**Note: Suggested FNAC for the retroareolar cyst and follow up as clinically indicated.**
